Stearman Aircraft, a subsidiary of Boeing, designed and developed the "Kaydet" series airplanes during the 1930's. Originally, they were designed and used as training planes for both the Army and the Navy. This plane was the last biplane employed by the armed forces. More "Kaydets" were manufactured, over 10,000 between 1936 and the end of World War II, than any other biplane.

The main difference in the several types of Kaydets were in the engines used. This particular replica was powered by a 215 hp Lycoming and also had an

improved electrical system.

Many Kaydets were put into use after the war as crop dusters as well as, in air shows.
