

This pack contains 10 x A6 sheets  
Each sheet contains full and half size flag stones (equating to 2 x 3 full sized flags) plus edging strips and corner stones.  
When removing the flag stones from the sheet, first bend the sheet diagonally, just a little, so that the corners stick up far enough for you to peel the first one away from the backing sheet. Once the first one has been lifted from the sheet it is easy to peel the rest away using your finger nails or a knife to lift them up from the backing sheet.

**NOTE, base surfaces must be rigid. Any bending or movement may dislodge the slabs. Most surfaces that are clean will accept the adhesive, FOR A PERMANENT ADHESION WE RECOMMEND THAT THE SLABS BE FIXED WITH A SPOT OF GLUE.**

Laying the paving is easy, and very addictive, once you start, you will find it hard to stop! Simply mark out the areas you want to pave and then start laying. It is easier to start from the pavement edge and work your way inwards. When you get to those awkward corners and recesses, you can cut down the stones with scissors to get them to fit. There are also lots of off-cuts around the edges of each sheet that can be cut up for all sorts of uses.

If you require extra weathering, use a soft pencil to lightly shade some of the flag stones. Finish off by rubbing the surface with your fingers to give a softer appearance. The edging is supplied as long strips to make laying easier. When fast you can then score to make it look like individual edging stones.
