Original design work on the JU87 series began in 1933 and the prototype fitted with a Rolls-Royce Kestrel Engine flew in 1935. Production versions were delivered in early 1937 and were used in Spain to test dive bombing techniques and the aircraft gained an awesome reputation against Poland and in France. In the spring of 1940 a more refined version was designed to use the JUMO 211 J-1 engine offering 1400 hp. and these began to replace earlier machines in the late spring of 1941. In 1942 it was found that bombs were not effective against tanks, a modified version of the JU87 G-1 was produced from a D-5. This was fitted with 2.37 mm cannons under the wing (which was increased in span) and was used with great success. JU87 variants were in service throughout the war and the aircraft was one of the best known and feared machines used by the LUFTWAFFE.
