前苏联T-72坦克以其独特的设计思想及优异的大倾角避弹构形而著称于世。自1974年量产迄今已有两万辆T-72族系坦克在15个国家服役。

T72外形紧凑，是现役有炮塔的坦克中最低矮的，精炼型2A46/125mm滑膛炮带有自动装填装置，可选择碳化钨弹芯的身甲弹，反坦克高爆炸弹及对付碉堡，轻装甲车的翼稳高爆炸弹；可在行进间对目标进行攻击。秉承俄系坦克优秀的机动性能，而且造价低廉。七、八十年代，T72坦克一直是前华约国家武装部队的核心力量。但存在装甲薄弱，射控系统稍逊的缺点，所以屡次受制于西方坦克。俄罗斯瓦西卡设计局根据多次局部战争的经验，九十年代初推出的衍生型T-90E坦克，将与T80U竞争下一世纪俄罗斯陆军主力装备。

The T-72 is the current generation of Soviet main battle tank. Armed with the formidable 125mm smooth-bore gun served by an autoloader, the T-72 carries a crew of three and weighs 41 tons.

The T-72s have distinctive fabric armor side-skirts to protect the torsion bar suspension. Advanced technologies like laser rangefinders, active IR, passive image intensification are being incorporated into the T-72s. The T-72M is a version of the T-72 family developed for foreign manufacture. It has been manufactured in Poland, Yugoslavia, Czechoslovakia and India, with export also to countries like Iraq, Syria, Libya and Finland.

The Soviet version of the T-72M is the T-72. It has thicker frontal armor at the turret than the T-72-M.
