

Intended for ages 14 and up.

USS Patterson DD-392 (1942) 1/700 3D printed Upgrade kit

Contains small parts

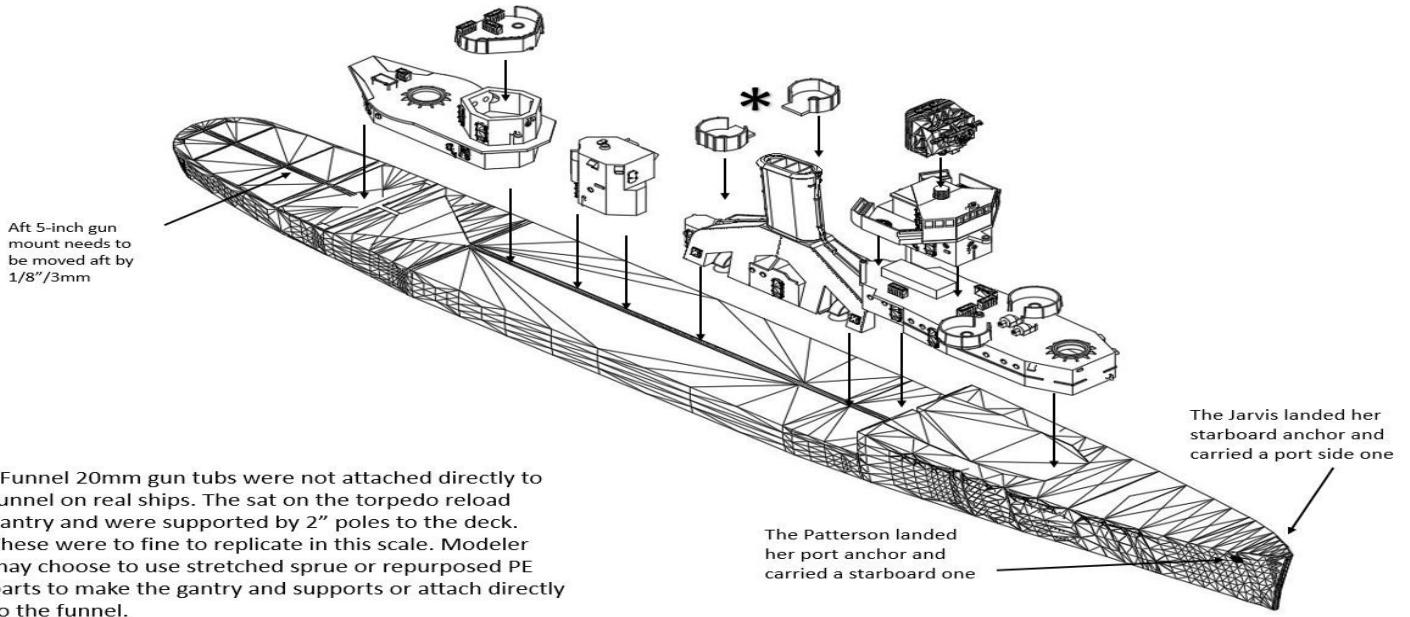

©2021 Kraken Hobbies-www.krakenhobbies.com

-Recommended for Midship Models kit #MSM70001 ,MSM70002, MSM70003 & MSM70004.

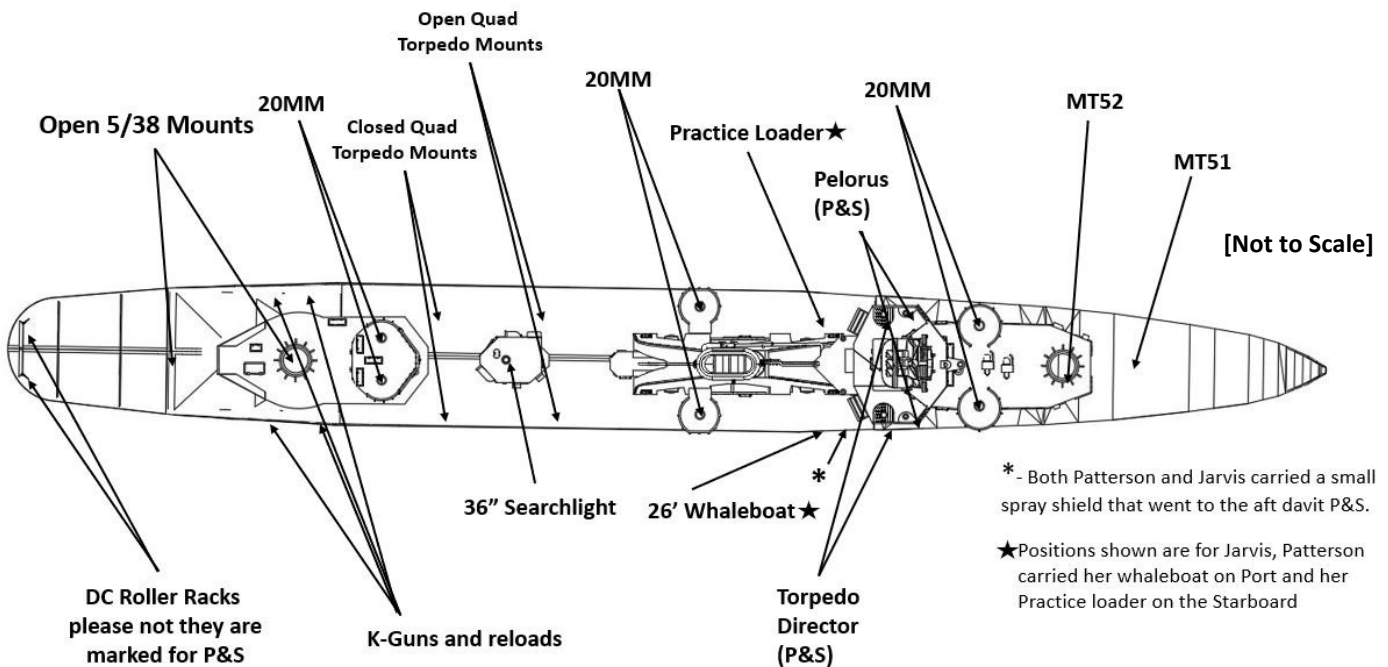

-Consider finishing with Photo etch set from Tom's Modelworks or Gold Medal Models.

- Consult reference photos for exact placements and fit, this kit is meant to cover May 1942– August 1942. Can also be used to build the *USS Blue DD-387* in the same timeframe

- Carefully remove parts from sprues, attach with Cyanoacrylate type glue or PVA

*Funnel 20mm gun tubs were not attached directly to funnel on real ships. They sat on the torpedo reload gantry and were supported by 2" poles to the deck. These were too fine to replicate in this scale. Modeler may choose to use stretched sprue or repurposed PE parts to make the gantry and supports or attach directly to the funnel.

* - Both Patterson and Jarvis carried a small spray shield that went to the aft davit P&S.

★Positions shown are for Jarvis, Patterson carried her whaleboat on Port and her Practice loader on the Starboard
